

JOINT INTERNSHIP ASSIGNMENT

Beekenkamp Plants is a breeder and producer of a complete range of young vegetable plants and starting material for tropical and blooming pot plants, perennials and bedding for the professional horticulture worldwide. We invest in the environment and make our contribution wherever possible. Sustainable business isn't just a concept, it's the way we work.

Syngenta Flowers Europe is Syngenta's distribution organisation serving Europe, Africa and the Middle East (EAME). We provide high-quality young plants, seeds and un-rooted cuttings for pot plants, bedding plants and perennials in a broad range of varieties. Through world-class science, global reach and commitment to our customers we help to increase crop productivity, protect the environment and improve health and quality of life.

X-tray[®] and Quality Plugs

Over ten years after the introduction of the X-tray by Syngenta Flowers, this reusable tray has proven itself in commercial use and has set a new industry standard. Praised by growers and envied by the competition, many users throughout Europe have learned to appreciate the benefits the X-tray offers.

The X-tray is made of highly polished polypropylene; this helps overcome a major problem facing some growers. Easy ejection takes the difficulty out of transplanting the plugs so that growers are no longer confronted with the problems associated with damaging the plugs during extraction.

Beekenkamp started to use this X-tray by 2018 and named it the BKX-tray.

Future sustainability and financial challenges regarding the X tray are:

- 1. Return flow of trays**
- 2. Cleaning**
- 3. Depot forming and storage**
- 4. Identification and registration**
- 5. Potential partners**

We are looking for an intern (or a group of interns) that can investigate the options of both companies working together on these future challenges.

Interested?
